1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Awesome post, Andrew! I think all the points you raised are true – but not for everyone. It takes a certain amount of exposure to the flip chart to use it properly – presenters need to have legible handwriting, not cover the flip chart as they write, and also keep some ready flip charts for non-candid scenarios.
