Industrial Crystallization Processes - METTLER TOLEDO

Crystallization from solution is a separation technique where a solid phase is separated from a mother liquor. In contrast to other separation processes, however, the dispersed phase consisting of numerous solid particles also forms the final product, that has to meet the required product specifications.

Crystallization - an overview | ScienceDirect Topics

Crystallization is regarded as the oldest and least understood separation and purification technique in the chemical industry. Recent years have seen greater research being undertaken, increasing numbers of applications recognized and greater opportunities for developments in such fields as new metallic, ceramic and polymeric materials, fine and speciality chemicals, and in medical ...
