laser forming (DLF) technique is another advanced powder processing technique. Recently, much effort has been made to apply this process to automobile, aerospace and medical fields due to the potential of producing complex shaped Ti alloy structures. In this paper, the above two techniques are introduced as recent powder metallurgy techniques.

Proceedings of the 2017 International Conference on Powder Metallurgy & Particulate Materials, June 13-16, Las Vegas, Nevada. Contains 94 technical papers encompassing over 1000 pages in a fully searchable PDF in a format that preserves the original color in all figures.

### **Advances in Powder Metallurgy & Particulate Materials 2017**

Advances in powder metallurgy explores a range of materials and techniques used for powder metallurgy and the use of this technology across a variety of application areas.

### **Advances in powder metallurgy: Properties, processing and**

Powder metallurgy (PM) is a familiar metal forming technology used to produce dense and precision components. Different powder and component forming routes can be used for the creation of an end product with specific properties for a particular application or industry.
