To better fulfil the mission of the journal, we have recently decided to launch two new features for the journal: (a) invited review papers providing an in-depth exposition of a topic of significant current interest; (b) short papers reporting truly new technologies in structural engineering.

Advances in structural adhesive bonding non-porous materials especially plastics and rubber. Curing requires

that the moisture found on most surfaces is neutral or slightly alkaline. Any acidic substrate, such as many hardwoods (e.g. oaks), will tend to inhibit the cure and in extreme cases prevent curing altogether.
