Inductive Logic Programming and Artificial Intelligence. Inductive Logic Programming (ILP) is a sub territory of AI which deals with the induction of hypothesized predicate definitions from examples and background knowledge. Logic programs are treated as a single representation, for example, background knowledge, and hypotheses.

INDUCTIVE LOGIC The idea of inductive logic as providing a general, quantitative way of evaluating arguments is a relatively modern one. Aristotle's conception of "induction" (epagogē) which he contrasted with "reasoning" (sullogismos) involved moving only from particulars to universals (Kneale and Kneale 1962, 36).

### **INDUCTIVE LOGIC - Fitelson**

Inductive logic programming (ILP) is a subfield of symbolic artificial intelligence which uses logic programming as a uniform representation for examples, background knowledge and hypotheses.

### **Inductive logic programming - Wikipedia**

Inductive programming (IP) is a special area of automatic programming, covering research from artificial intelligence and programming, which addresses learning of typically declarative (logic or functional) and often recursive programs from incomplete specifications, such as input/output examples or constraints.

PDF. About these proceedings. Introduction. 1 "Change is inevitable." Embracing this quote we have tried to carefully experiment with the format of this conference, the 15th International Conference on Inductive Logic Programming, hopefully making it even better than it already was. But it will be up to you, the inquisitive reader of this ...
