Fuzzy logic is a form of many-valued logic in which the truth values of variables may be any real number between 0 and 1 inclusive. It is employed to handle the concept of partial truth, where the truth value may range between completely true and completely false. By contrast, in Boolean logic, the truth values of variables may only be the integer values 0 or 1.

A fuzzy concept is a concept of which the boundaries of application can vary considerably according to context or conditions, instead of being fixed once and for all. This means the concept is vague in some way, lacking a fixed, precise meaning, without however being unclear or meaningless altogether. It has a definite meaning, which can be made more precise only through further elaboration ...

The GIMP Documentation Team and other users have provided you with the information necessary to understand how to use GIMP. The User Manual is an important part of this help. The current version is on the web site of the Documentation Team [GIMP-DOCS] in HTML format. The HTML version is also available as context sensitive help (if you installed it) while using GIMP by pressing the F1 key.
