3. the goal is to minimize a linear function of the variables: $c^T x = c_1 x_1 + \dots + c_N x_N$. If x satisfies the constraints ($Ax = b$, $x \geq 0$) then we call x a feasible solution to the canonical Linear Programming problem; if further x minimizes the linear function $c^T x$, then x is called an optimal solution to the canonical Linear Programming problem.

Introduction Generalized Linear Models Structure For example, a common remedy for the variance increasing with the mean is to apply the log transform, e.g. $\log(y_i) = \beta_0 + \beta_1 x_i + \epsilon_i$ $E(\log Y | x) = \beta_0 + \beta_1 x$ This is a linear model for the mean of $\log Y$ which may not always be appropriate. E.g. if Y is income perhaps we are really interested

However, all major topics are also presented in an alternative manner which is independent of determinants. The book has an introduction to various numerical methods used in linear algebra.
