Section 9.4: Vectors and Analytic Geometry Definition: A vector is a quantity (such as velocity or force) that has both magnitude and direction. In particular, an  $n$ -dimensional vector is an ordered  $n$ -tuple of real numbers  $\vec{x} = \langle x_1, x_2, \dots, x_n \rangle$ . The numbers  $x_1, x_2, \dots, x_n$  are called the components of  $\vec{x}$ .

Chapter 11. Three-dimensional analytic geometry and vectors Section 11.2 Vectors and the dot product in three dimensions Geometrically, a three-dimensional vector can be considered as an arrow with both a length and direction. An arrow is a directed line segment with a starting point and an ending point.

### **Three-dimensional analytic geometry and vectors**

TEACHING OF ANALYTIC GEOMETRY AND VECTOR CALCULUS 25 We chose the area of analytic geometry and vector calculus also by the reason of understatement the methods that this area proposes for solving the geo-

3 Analytic Geometry 1541 1542 In Chapter 2, we studied vectors, vector spaces and linear mappings at 1543 a general but abstract level. In this chapter, we will add some geometric 1544 interpretation and intuition to all of these concepts. In particular, we will 1545 look at geometric vectors, compute their lengths and distances or angles 1546 between two vectors.
