THE EPIDEMIOLOGY AND IMPACT OF DEMENTIA - who.int

The word “dementia”™ describes a set of symptoms that may include memory loss and difficulties with thinking, problem-solving or language.. These changes are often small to start with, but for someone with dementia they have become severe enough to affect daily life.

What is dementia? | Alzheimer's Society

Lewy body dementia (LBD) is a type of progressive dementia that leads to a decline in thinking, reasoning and independent function because of abnormal microscopic deposits that damage brain cells over time.

Lewy Body Dementia (LBD) | Symptoms & Treatments

Dementia is a broad category of brain diseases that cause a long-term and often gradual decrease in the ability to think and remember that is great enough to affect a person's daily functioning. Other common symptoms include emotional problems, difficulties with language, and a decrease in motivation. A person's consciousness is usually not affected. A dementia diagnosis requires a change from ...
