

design for manufacturability handbook pdf

Design for manufacturability (also sometimes known as design for manufacturing or DFM) is the general engineering practice of designing products in such a way that they are easy to manufacture. The concept exists in almost all engineering disciplines, but the implementation differs widely depending on the manufacturing technology.

In electronics engineering, a design rule is a geometric constraint imposed on circuit board, semiconductor device, and integrated circuit (IC) designers to ensure their designs function properly, reliably, and can be produced with acceptable yield. Design rules for production are developed by process engineers based on the capability of their processes to realize design intent.

This application note presents an overview of the PCB stackup construction and material selection criteria. It discusses the important material parameters that influence the electrical performance and manufacturability of the design, as well as layer usage and the importance of layer organization within the stackup for arriving at a well-designed PCB.
