The somatotrophic axis, consisting of growth hormone (GH), hepatic insulin-like growth factor I (IGF-I), and assorted releasing factors, regulates growth and body composition. Axiomatically, since optimal body composition enhances reproductive function, general somatic actions of GH modulate reproductive function. A growing body of evidence supports the hypothesis that GH also modulates ...

Methods. The hypothesis of the chronic internal diseases cause due to pathological activity of capillaries with emerging micro-focus of hypothermia, a continuous trigger for disease development in any affected organ, was declared in the US patent "Therapeutic Device and Method", i.e. thermobalancing therapy (TT) and therapeutic device.

### **The Origin of Chronic Diseases Can Be in Capillary**

The ectocervix is covered by mature squamous mucosa, whereas the endocervix is lined by mucus-secreting endocervical epithelium. The latter undergoes squamous metaplasia through both reserve cell hyperplasia (true squamous metaplasia) as well as squamous epithelialization (direct ingrowth of existing squamous epithelium).
