

garment manufacturing technology pdf

Direct to garment printing (DTG) is a process of printing on textiles using specialized ink jet technology. DTG printers hold the garment in a fixed position, and use specialty inks that are applied to the textile directly by the print head and are absorbed by the garment's fibers; these features prevent the distortion seen with some other textile printing techniques.

Direct to garment printing - Wikipedia

Textile manufacturing is a major industry. It is based on the conversion of fiber into yarn, yarn into fabric. These are then dyed or printed, fabricated into clothes. Different types of fibers are used to produce yarn. Cotton remains the most important natural fiber, so is treated in depth. There are many variable processes available at the spinning and fabric-forming stages coupled with the ...

82 Commercial Garment Technology Polyester fibres burn readily and quickly with a chemical smell. It continues to burn after removing from flame and gives a plastic like in crushable bleed.

Classification and general properties of textile fibres

1. Straight piece rate: In the straight piece rate system, a worker is paid straight for the number of pieces which he produces per day. In this plan, quality may suffer. Usually in the garment industries this incentive system is in use but this system promotes only productivity not the quality which is a prime objective of garment manufacturing.
