Choked flow is a compressible flow effect. The parameter that becomes "choked" or "limited" is the fluid velocity. Choked flow is a fluid dynamic condition associated with the Venturi effect. When a flowing fluid at a given pressure and temperature passes through a constriction (such as the throat of a convergent-divergent nozzle or a valve in a pipe) into a lower pressure environment the fluid ...

Pipe Flow Expert User Guide

The Rayleigh flow model begins with a differential equation that relates the change in Mach number with the change in stagnation temperature, T_0 . The differential equation is shown below. $\frac{dT_0}{T_0} = \frac{1}{\gamma} \frac{dM^2}{M^2} (1 + \frac{\gamma-1}{2} M^2)$ Solving the differential equation leads to the relation shown below, where T_0^* is the stagnation temperature at the throat location of the duct which is required for thermally choking the flow.

Rayleigh flow - Wikipedia

FOREWORD This manual is intended to give an overview of the role of control valves in the behaviour of a process control loop. This overview consists the information on \bar{v}, u, id
